

MARIE MAREŠOVÁ

After 10 years in Logistics & Distribution, Warehouse and Sales operations I discovered my true love is programming and since 2019, completed classes and continue to educate myself.

I experienced the E2E Supply Chain from a buyer position all the way to claims and returns. From daily operations to managing distribution to almost all of Western Europe. And now I am determined to become a front-end developer. After an intensive 3 months (300h) course, focused mainly on JavaScript and React, I feel ready to start my new career.

I may not be the most experienced front-end developer just yet, but I am driven and passionate about programming. I am a fast learner, a team player, I am optimistic, enthusiastic, and dynamic. I can also offer skills, developed during my previous career - out of the box thinking, problem solving, patience and flexibility.
